Intelligent Security Solutions

The Company

Inner Range began designing and manufacturing Integrated Security and Access Control Systems in 1988. Today there are more than a hundred thousand installed Inner Range systems delivering state of the art solutions to Corporations, Government departments and Institutions all around the Globe.

The above logos are all registered trademarks of their respective entities.

All these organisations rely on their Inner Range systems, great and small, to secure and manage their critical assets.

The Inner Range research centre in Melbourne, Australia is home to a large engineering and product development team which is supported by an even larger complement of dedicated test engineers, trainers and IT technical support specialists.

The Inner Range Europe facility in Reading, UK provides marketing, and product supply for this region as well as technical support services in that time zone.

Inner Range products are sold around the world by a network of authorised distributors who value their relationship with Inner Range and are committed to standards of service that reflect the commitment to excellence that characterises Inner Range and its products.

Is this a proven company that is at the forefront of technology development in their field?

……..." Absolutely !"

The Integriti Technology Platform

Depending on the requirements, a variety of different types of Integriti products can be networked together to provide the system backbone, to which may then be connected a large range of devices such as security detectors, electronic door locks, card readers, fingerprint readers, keypads and other similar products.

Use the Integriti system to:

- *Monitor and control the movement of all personnel and vehicles in your facility.*
- *Easily assign access permissions mandating who goes where and when.*
- *Manage the reporting and response to 24 hour security alarms.*
- *Protect critical assets and manage risk.*
- *Ensure compliance with business systems and government regulations.*
- *Respond to emergency situations, lockdowns and alerts.*
- *Manage visitor permissions.*
- *Automatically enforce licences and competencies for health and safety obligations.*
- *Interact with Closed Circuit TV, Lighting, Air conditioning Systems and Intercoms.*

The new Integriti technology platform is the result of continuous industry participation and product development by the people at Inner Range. From its distinctive new red printed circuit boards to its powerful new ARM processors and smart fuses this technology is cutting edge.

Even though it's a real class act Integriti is no snob, it will talk to almost anybody. Its modern architecture has been designed to facilitate integration with all manner of associated technologies. An incredible smart phone and tablet application, SALTO and Aperio RF door integration, high level interfaces to all major brands of lifts and air conditioning systems and we have only just begun to list the possibilities.

Is this a product that can deliver a state of the art solution?

.... " Absolutely ! "

The Software

The Integriti System Management Software Suite is a true enterprise class solution, designed from the ground up for the Internet Age. Leveraging the very latest platforms and technologies, Integriti software is a world-class product that packages guaranteed reliability, scalability and performance, in a way that will change the game forever!

As a native 64-bit, cluster-aware application, Integriti software adheres to current IT industry best practices, enabling system administrators to leverage the very latest computer hardware and virtual machine environments, without restrictions, without caveats and without excuses.

Breathtakingly powerful, yet amazingly intuitive and easy to use, all versions of Integriti Software feature a forensic audit trail facility that tracks and time stamps each and every programming change to the system with operator ID and precise details of the change.

Integriti Software starts with the Express edition for small sites, offering everything you will need for basic system management. The incredibly flexible user permissions and the Integriti GateKeeper application provide a convenient end user focused approach to system operation and management, while the lightening quick search functions will present your results in an instant. All this is packaged on a single PC application.

For medium sites upgrade to Integriti Professional edition and you have a network capable system with real grunt. Large system dimensions, drill down schematic maps, multiple workstations, integration options with existing HR systems and a range of third party products, plus a host of other innovative features that redefine the meaning of system management.

For enterprise projects, use the global identities in Integriti Professional edition to span sites across the nation or across the globe, then select and deploy components of the comprehensive range of optional Integriti software modules to tailor the software to handle a plethora of specialised tasks.

CCTV integration

Advanced Reports
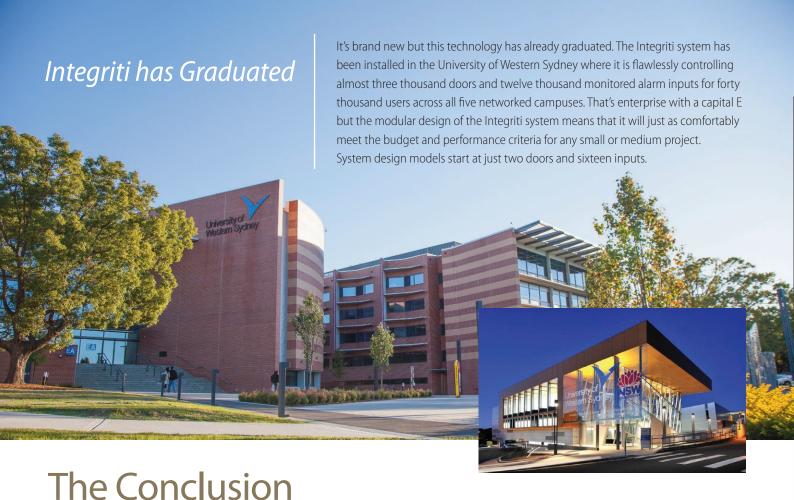

Alarms and Alerts

User Qualifications

These are just some of the optional modules available to complete the offering.

Drawing on Inner Range's 20 years of experience in designing continent-spanning multi-site access control and intruder systems, the Integriti System Management Software takes the next step; continuing to deliver amazing solutions for projects of all sizes, from two doors to ten thousand doors, from the corner store to the largest hospital or university.

What can you say when you are looking at software that shatters your pre-conceptions and simply surpasses all of your expectations?

People who use this software

all say just two words

........" Simply Brilliant ! "

Integriti has Graduated

It's brand new but this technology has already graduated. The Integriti system has been installed in the University of Western Sydney where it is flawlessly controlling almost three thousand doors and twelve thousand monitored alarm inputs for forty thousand users across all five networked campuses. That's enterprise with a capital E but the modular design of the Integriti system means that it will just as comfortably meet the budget and performance criteria for any small or medium project. System design models start at just two doors and sixteen inputs.

The Conclusion

What we have here is an experienced company with impeccable credentials in their area of expertise.
They have a strong compliment of dedicated and innovative people to support their products and they continue to develop best in class solutions.

They also have thousands of systems of varying size and complexity installed around the world delivering solutions for an existing client base that includes an impressive list of credible companies and organisations.

This company is now proposing a new cutting edge product offering that is already installed in the most demanding environments and performing flawlessly.

This new product offering has all of the necessary attributes to deliver tailored solutions for any size facility and it has the power, the flexibility and the integration capability to deal with any project specification that comes its way.

Just like its famous predecessor the Concept 4000; the Integriti platform sets new industry benchmarks and has the firepower to deliver real and comprehensive solutions in today's exciting but demanding technology environment.

All things considered you would have to conclude that the solution being offered is

" Simply Brilliant……."

So is this the product for you?

……." Absolutely ! "
